

Instructions:

1. Glue or gluestick this page to a manila folder, making sure to cover the entire underside of the spinner arrows with adhesive, as well as the edges of the spinner squares.
2. Wait for the glue to dry and then cut the spinner squares and arrows out, including the circular holes in the arrows. Make a small slit in the center of the squares.
3. Insert a brass fastener through the arrow and spinner, splay the ends of the fastener.
4. Test to make sure the spinner works well, and secure on underside with tape.
